

AGBUGBA DAVID C.

Full Stack Developer | React, Node.js, Laravel, Cloud & Secure Systems

PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience building secure, scalable, and high-performance web applications across SaaS, CRM, automation, fintech-adjacent, and analytics platforms. Strong expertise in React, Next.js, Node.js, Laravel, CodeIgniter, PostgreSQL, MySQL, and cloud deployment on AWS.

Experienced in designing RESTful APIs, microservices, role-based access systems, secure authentication flows, and responsive dashboards. Proven ability to build production-ready systems with strong focus on performance, security, database optimization, and maintainable architecture.

Hands-on experience delivering solutions involving billing systems, user management, workflow automation, AI-powered analytics, and cloud infrastructure. Passionate about secure coding practices, compliance-ready systems, and solving complex business problems in regulated environments.

CORE SKILLS

Frontend

- React.js, Next.js, TypeScript, JavaScript
- Redux, Zustand
- Tailwind CSS, Responsive UI, Dashboard Development
- API Integration, UI/UX Optimization, Performance Tuning

Backend

- Node.js, Laravel, CodeIgniter, PHP
- RESTful APIs, Microservices Architecture
- Authentication & Authorization (JWT, OAuth, RBAC)
- Third-Party API Integration
- Secure Data Exchange and Encryption

Database & Infrastructure

- PostgreSQL, MySQL
- SQL Optimization, Database Design
- AWS (EC2, S3, RDS)
- Docker, Git, CI/CD Workflows
- Caching, Performance Monitoring

Security & Compliance

- Secure Coding Best Practices
 - Role-Based Access Control
 - API Security and Audit Logging
 - Data Privacy Awareness (NDPR / GDPR Concepts)
 - Vulnerability Mitigation and System Hardening
-

PROFESSIONAL EXPERIENCE

Techvibes Ltd — Software Architect / Team Lead

2022 – 2025

- Designed and developed end-to-end SaaS platforms, scalable APIs, and enterprise dashboards.
- Built secure backend services and microservice-based architectures using Laravel, Node.js, and CodeIgniter.
- Developed reusable frontend components and high-performance user interfaces with React and Next.js.
- Implemented authentication and authorization systems using JWT and role-based access control.
- Designed optimized PostgreSQL and MySQL database structures for large-scale applications.
- Deployed and maintained cloud-hosted systems on AWS EC2, S3, and RDS.
- Collaborated with designers, product teams, and developers to deliver secure, production-ready solutions.
- Led code reviews, technical documentation, and architecture decisions across multiple projects.
- Mentored junior developers and enforced engineering best practices.

Oaks Intelligence — Frontend Developer

2023 – 2024

- Built responsive and enterprise-grade frontend applications with React and modern UI architecture.
- Integrated APIs, media workflows, and real-time feedback systems into web platforms.
- Improved application performance, usability, and user retention through UI/UX enhancements.
- Worked closely with backend engineers and designers to deliver seamless product experiences.

Freelance Full Stack Developer

2020 – 2022

- Delivered CRM systems, custom dashboards, billing systems, automation tools, and API-driven platforms.
- Built secure backend APIs and integrated third-party services including payment and notification systems.
- Developed role-based admin panels and user management systems.
- Worked with clients across different industries to design scalable and maintainable web applications.

SELECTED PROJECTS

MailCheetah AI

Automation platform for AI-driven email and campaign workflows.

- Built an automation engine that improved design and campaign workflow speed by 50%.
- Developed REST APIs, reusable UI components, webhooks handlers, and dynamic template builders.
- Implemented secure user authentication, permissions, and scalable backend workflows.
- Stack: Codeigniter 4, MySql, Microservices

QampusPlus

School management platform with CBT, billing, and role management modules.

- Designed and developed CBT engine, payment workflows, billing systems, and administrative dashboards.
- Built role-based access controls for students, teachers, principals, and administrators.
- Created scalable frontend architecture and optimized backend performance.
- Stack: React, Laravel, MySQL

Vorkio

AI-powered crypto analytics platform.

- Developed a platform providing token risk scoring, on-chain analytics, and portfolio optimization.
- Integrated blockchain-related data services and AI-powered insights.
- Built secure dashboards and real-time data visualization tools.
- Stack: Next.js, Node.js, PostgreSQL, Supabase

Kommunita

Community and matching platform.

- Redesigned user workflows and improved retention by 20%.
- Optimized UI/UX and backend logic for better user engagement and performance.

KEY ACHIEVEMENTS

- Built and delivered 20+ SaaS dashboards, CRM systems, and automation applications.
 - Improved campaign and design workflow efficiency by 50% through automation.
 - Increased user retention by 20% through UX redesign and optimization.
 - Led architecture and engineering decisions for multiple production systems.
-

EDUCATION

Higher National Diploma (HND), Computer Science

Federal Polytechnic Bida 2018 – 2020

National Diploma (ND), Computer Science

Akwa Ibom State Polytechnic 2013 – 2016
